

Kévin PRUD'HOMME

Software Development Engineer

I'm a software developer engineer that took part into multiple domains and project with diverse technologies in order to achieve an experience where I can do anything.

Passionate by technology since I'm a kid, and wanting to get 'behind the screen', I can create any kind of application you need.

My speciality : transform imagination into reality. You can count on me with my rigor, my common sense and team working spirit to help you reach your goals.

Professional experience

Software Development Engineer AngularJS and C#

From February 2021 to July 2022 [Klx](#) Lisbon

Member of a team supervised by a project/domain manager for the client Klx, my job was to act into the development, maintenance, correction and evolution of a software on IOs tablets for the needs of a customer into the insurance and health domain.

- Customer need analysis
- Test and implementation of the tasks in AngularJS
- Software's migration to Windows tablets as a 'Technical Leader'
- Improvements of the existing software with the agreement of the client

In parallel, i was responsible of a small project in the aim of creating an application that can filter customer data for the conformity and vigilance cell as a Developer/Product Owner

- Project constitution
- Writing functional specifications
- Test and implementation of the software in C#
- QA

Consultant Engineer test bench

From September 2017 to August 2019 [AUSY](#) Rennes

Consultant Engineer taking part into multiple projects for big clients in the defense domain and industry.

- Project conception
- Specifications analysis
- Test integration implementation on the test benches (C langage, TestStand)
- Test bench integration
- Validation reports
- Act on multiple task working in 'result account'
- Electronic components's test implementation in Python
- Code correction and maintenance in C++

Software Development Engineer C#.Net

From July 2016 to August 2017 [SOPRA STERIA GROUP](#) Saint-Grégoire

Professionnalisation contract. Member of a team supervised by a project manager using elements of the Agile methods working in V cycle, I act on the development of multiple applications in our charge. These software were important for the needs of our client in the Telecom sector.

- Customer need analysis
- Functional specifications redaction
- Unit test and implementation in C#.Net using Entity Framework
- QA
- Code review and robustness improvement
- Continuous integration and delivery under Jenkins
