

Kévin PRUD'HOMME

Software Engineer

Freelance software engineer with experience in diverse projects across multiple industries, covering all types of software development.

Passionate about technology since childhood and driven by the desire to "go behind the screen," I design tailor-made applications for any environment.

My specialty: turning imagination into reality. You can rely on my rigor, practical mindset, and team spirit to help you achieve your goals.

Certification

● Certification Professionnal Scrum Product Owner 1

October 2024 [Extia internal formation](#) Online

Professional Scrum Product Owner I (PSPO I) certification, achieved as part of a career transition toward the Product Owner role in a Scrum environment.

Education

● Information System Engineer Diploma

From September 2014 to September 2017 [Enssat Mines-Télécom](#) Lannion

Engineering degree in Computer Science, specializing in information systems, advanced algorithms, databases, artificial intelligence, natural language and speech processing, and virtualization.

● Computer sciences university degree diploma

From September 2012 to June 2014 [IUT Aix-Marseille](#) Aix-en-Provence

Higher technician training in programming, focused on algorithms, C++, Java, PHP, and JavaScript, as well as database management and manipulation.

Professional experience

● Scrum Master Engineer

From September 2025 to April 2026 [Richardson](#) Marseille

In a team among ten developers under a project manager for the company RICHARDSON specialized in selling products into the sanitary and piping sector, my role was to bring good practices of the Scrum Agile methods and make the work of all my teammates easier.

My main activity was to coordinate a part of the team in the accomplishment of the project about handling the clients of the company for the migration to new technologies of their ERP.

- Bringing functional knowledge to developers
- Be the communication center between services
- Getting missing data in order to give a direction for the developments
- Coordination of the team
- Reorganisation, attributions of tasks depending the subjects, expertise of each teammate and priorities of the moment

Professional experience

Software Development Engineer in C#.Net

From January 2024 to June 2025 [Bontaz](#) Marnaz

Member of the IT department at *Bontaz* (automotive precision parts industry), I contributed to the migration of the company's internal ERP system. My role mainly involved ensuring a smooth transition without disrupting business operations, proposing and developing relevant enhancements to the existing software in **C#.Net**, as well as providing daily support and assistance to users.

- User support
- ERP bug fixing
- Development of new features
- Database archiving and migration to SQL Server
- Continuous integration and code review

Software Development Engineer Angular

From December 2022 to December 2023 [Eviden](#) La Seyne-Sur-Mer

Member of an Agile team following the Scrum methodology, I contributed to the development and maintenance of an Angular application in the defense and **Big Data** sector for the client *Athéa*. My main role focused on developing and maintaining the front-end, reducing technical debt to make the application more robust and efficient. The project organization was structured around three distributed squads, rigorously applying all Scrum ceremonies.

- Requirements analysis
- Sprint planning and organization
- Sprint task execution as a developer
- Coordination with the Product Owner
- Code review and continuous integration
- Sprint retrospectives and deliveries

Software Development Engineer AngularJS and C#

From February 2021 to July 2022 [Klx](#) Lisbon

As a member of a team led by a project manager for the end client *La Médicale de France*, I contributed to the development, maintenance, bug fixing, and enhancement of an iOS tablet application for the insurance and healthcare sector. I also actively participated in its migration to more generic Windows tablets, using the Electron.js framework.

- Client requirements analysis
- Implementation and testing in **AngularJS**
- Migration of the application to Windows tablets as **Technical Lead**
- Enhancement of the existing software in collaboration with the client

In parallel, I took responsibility for an ancillary project focused on filtering client data for the vigilance unit, in a hybrid **Developer / Product Owner** role. The goal was to enable clear and reliable identification of policyholders.

- Project definition and scoping
- Writing functional specifications
- Implementation and testing in **C#**
- Quality assurance (QA)

Consultant Engineer test bench

From September 2017 to August 2019 [AUSY](#) Rennes

Consulting engineer working on multiple projects for major clients such as **Thales** and **Safran** in the defense sector.

- Project design and requirements analysis
- Development and implementation of integration tests for test benches (C, TestStand)
- Integration of tests on measurement benches
- Drafting validation reports
- Contribution to various profit and loss account tasks
- Implementation of electronic component tests in Python
- Debugging and maintenance of C++ code

Professional experience

Software Development Engineer C#.Net

From July 2016 to August 2017 [SOPRA STERIA GROUP](#) Saint-Grégoire

Internship followed by a professional training contract within a team led by a project manager and supported by a technical lead, applying certain Agile principles within a V-model framework. I contributed to the entire delivery process, including the development and enhancement of strategic software for the client *Orange Business Services*.

- Client requirements analysis
- Writing functional specifications
- Implementation and unit testing in **C#.NET** and **Entity Framework**
- Quality assurance (QA)
- Code review and robustness improvement
- Continuous integration and deployment with **Jenkins**

Java Developer

From April 2014 to June 2014 [CNRS](#) Luminy

Design and development of the UI for a Java application using the SWT/JFace libraries, ensuring cross-platform compatibility. I was the sole developer, supervised by my internship mentor, who was responsible for the project.

- Learned to work with SWT/JFace libraries
- Created and proposed mock-ups for the UI
- Initiated UI development under Eclipse RCP
- Developed various modules starting from a blank core
- Conducted tests on the implemented features
