About

Software Engineer with 10 years of experience across full-stack development, software modernization and Agile delivery.

Experienced in software modernization, ERP migration, SQL Server, CI/CD and Agile/Scrum environments.

Comfortable moving between technical, functional and coordination responsibilities, from development and technical leadership to Scrum Master and Product Owner activities.

Expériences professionnelles

Scrum Master Engineer

From Sept. 2025 to Apr. 2026 Richardson Marseille

Software team of 10 developers working on the migration of Richardson's customer-management ERP to new technologies. Acted as a coordination point between developers, business services and the Project Manager, while introducing and reinforcing Scrum practices within the team.

- Coordinated development activities by assigning and reorganizing tasks according to priorities, subjects and team members' expertise.
- Bridged the gap between business and development by bringing functional knowledge to developers and clarifying requirements.
- Gathered missing information and resolved functional uncertainties to provide clear direction for development.
- Facilitated communication between services and ensured that relevant information reached the right stakeholders.
- Promoted Scrum practices and helped improve team organization and day-to-day collaboration throughout the ERP migration.

Software Development Engineer in C#.Net

From Jan. 2024 to Jun. 2025 Bontaz Marnaz

Member of the IT department supporting the migration and modernization of the company's internal ERP system. Contributed to the transition while maintaining business continuity, developing new features and providing technical support to users in C#/.NET and SQL Server.

- Developed and maintained ERP features in C#/.NET, adapting the application to evolving business needs.
- Investigated and fixed application issues to ensure continuity of daily operations.
- Provided user support and translated functional needs into practical software solutions.
- Managed SQL Server database archiving and migration activities as part of the ERP transition.
- Participated in code reviews and continuous integration, contributing to code quality and reliable deliveries.

Professional experience

Software Development Engineer Angular

From Dec. 2022 to Dec. 2023 Eviden La Seyne-Sur-Mer

Member of a distributed Agile/Scrum team developing and maintaining an Angular application for Athéa in the defense and Big Data sector. Focused on front-end development and technical debt reduction, while contributing to requirements analysis, sprint organization and delivery across three distributed squads.

- Developed and maintained the Angular front-end, implementing new features and supporting the evolution of the application.
- Reduced technical debt to improve application robustness, maintainability and long-term development efficiency.
- Analyzed requirements and translated functional needs into development tasks.
- Coordinated with the Product Owner and other squads to clarify requirements and align development priorities.
- Participated in sprint planning, code reviews, continuous integration and retrospectives, contributing throughout the development lifecycle.
- Delivered features

Software Development Engineer AngularJS and C#

From Feb. 2021 to July 2022 Klx Lisbon

Member of a development team working for the end client La Médicale de France. Contributed across development, technical leadership and functional activities, from AngularJS development and platform migration to client requirements and Product Owner responsibilities.

- Developed and maintained the application in AngularJS, including enhancements, bug fixing and testing.
- Led the technical migration from iOS tablets to Windows tablets using Electron.js.
- Analyzed client requirements and worked with stakeholders to translate business needs into technical solutions.
- Took on a hybrid Developer / Product Owner role for an ancillary data-filtering project, defining its scope and writing functional specifications.
- Implemented and tested the solution in C#, while contributing to quality assurance.

Consultant Engineer test bench

From Sept. 2017 to Aug. 2019 AUSY Rennes

Consulting engineer working on test and validation projects for major defense-sector clients, including Thales and Safran. Contributed to the design, integration and validation of test systems, combining software development with requirements analysis and hardware-oriented testing.

- Analyzed project requirements and contributed to the design of test solutions.
- Developed and integrated automated tests using C and TestStand for test benches and measurement systems.
- Implemented electronic component tests in Python and supported their integration into test environments.
- Debugged and maintained C++ code as part of test and validation activities.
- Produced validation reports and supported the qualification of delivered systems.

Software Development Engineer C#.Net

From July 2016 to Aug. 2017 SOPRA STERIA GROUP Saint-Grégoire

Joined a software development team working for Orange Business Services, contributing to the development and evolution of business-critical software within a structured V-model delivery process incorporating Agile practices.

- Analyzed client requirements and translated them into functional specifications and technical solutions.
- Developed and unit-tested applications in C#/.NET using Entity Framework.
- Contributed to quality assurance, code reviews and improvements to software robustness.
- Participated in the complete delivery lifecycle, from requirements analysis through development, testing and deployment.
- Implemented and maintained continuous integration and deployment pipelines with Jenkins.

Filmmaking, Production, Acting

Travel
Island, Lapland, Portugal, Japan, Belgium, Italy, Switzerland, Germany, Austria, Hungary, Slovenia

Professional experience

Java Developer

From Apr. 2014 to Jun. 2014 CNRS Luminy

Bachelor internship as the sole developer of a Java desktop application, working under the supervision of a technical mentor. Designed and developed the user interface and application modules using SWT/JFace and Eclipse RCP, with a focus on cross-platform compatibility.

- Designed and proposed UI mock-ups before implementation.
- Developed the application UI and multiple modules from an initial core using SWT/JFace and Eclipse RCP.
- Tested implemented features and contributed to the stability of the application.

Certification

Certification Professionnal Scrum Product Owner 1

Oct. 2024 Scrum.org Online

Education

Information System Engineer Diploma

From Sept. 2014 to Sept. 2017 Enssat Mines-Télécom Lannion

Engineering degree in Computer Science, specializing in information systems, advanced algorithms, databases, artificial intelligence, natural language and speech processing, and virtualization.

Computer sciences university degree diploma

From Sept. 2012 to Jun. 2014 IUT Aix-Marseille Aix-en-Provence

Higher technician training in programming, focused on algorithms, C++, Java, PHP, and JavaScript, as well as database management and manipulation.
